

Blaze Facts

Did You Know?

- That Blaze Products Corporation is the only manufacturer of chafing dish fuel to be ISO 9001:2008 Certified? This assures our customers of product reliability, quality and consistency - - *in every can*.
- That Blaze Products Corporation has the world's most extensive offering of chafing dish fuels? This means the best for each chafing and buffet use, from one manufacturer.
- That Blaze Products Corporation has the most extensive chafing dish facility in the world? This means the most consistent, highest quality chafing dish fuel. Should there ever be a question or concern, our testing records are kept for a minimum of 7 years!
- That Blaze reaches the 212°Fahrenheit (100°Celsius) boiling point faster and has more BTU's than any other chafing dish fuel? This ensures hot, safe food for the buffet customer ("The Hottest Name if Chafing Dish Fuel" is more than just a tag line).
- That *independent laboratory tests prove* Blaze chafing dish fuels are the hottest? This means hot, safe food for the buffet customer. Remember: chicken must be heated to 165°Fahrenheit (74°Celsius) to avoid salmonella, pork to 158°Fahrenheit (69°Celsius) to avoid trichinosis, and beef to 158°Fahrenheit (69°Celsius) to avoid E. Coli. If food is not kept hot, food poisonings can occur.
- That Blaze chafing dish fuel is clean burning with no offensive odor? This means an enjoyable buffet experience for the customer *and* repeat business for the operator.
- That only Blaze supplies embossed, seamless aluminum cans? This means never an unmarked can and never the danger of welds or seams that might split, spilling flammable materials close to food.
- That Blaze chafing dish fuels produce the latest amount of soot on the chaffer pan of any product on the market. This means less time cleaning for the operator's staff.
- Blaze Products Corporation uses 200-pound test cartons. This means our cartons will withstand the rigors of shipping to customers and operators around the world.
- Blaze Products prints standard operating procedures on every case to ensure every customer knows the proper use of Blaze fuel.
